

SJ Sensor Float Switch

The EPG SJ Sensor Float Switch is used to accurately measure liquid levels and transmit signals to a pump controller.

The EPG Sensor Float Switch is perfect for confined areas and is designed to be used as a pilot duty, narrow angle liquid level sensing device. In pump level applications, when tipped slightly above horizontal, the mercury within the housing slides over metal contacts sending a signal to a controller to activate or deactivate the pump depending on the application. The sensor float is also available for low level applications and can be mounted to a discharge pipe or similar device or can be suspended from above.

- ◆ Flexible, 16 gauge, 2 conductor cable (waterproof, chemical resistant, neoprene)
- ◆ Small float housing
- ◆ 2.81" dia. x 3.42" long (7.14 cm x 8.68 cm)
- ◆ Not sensitive to rotation
- ◆ Can be used in most liquids up to 140° F (60° C)
- ◆ Impact resistant, non-corrosive, PVC housing
