

EPG Leak Detection Sensors

EPG Leak Detection Sensors are designed to be used in landfill recirculation and bioreactor systems to detect leakage. Conductance is made from probe to probe through the presence of liquid. Typically, the sensor sends a signal to an intrinsically safe relay which can be used to annunciate an alarm condition or shut equipment down. The control circuit has an energy potential so low that it is incapable of causing ignition of flammable or combustible materials.

Sensor Features:

- ◆ Molded Sensor Head
- ◆ Jacketed Sensor Cable

Landfill/Remediation Equipment ◆ Telemetry Hardware ◆ Systems Integration
