

TSP Submersible Pumps

The EPG TSP Small Diameter Submersible Pump with level sensor mount is designed with the small diameter vertical well in mind.

This pump can be used to pump groundwater, leachate, and other contaminated liquids. Since the level sensor mounts below the TSP pump motor, it is able to be installed in wells as small as four inches in diameter. When used in conjunction with EPG's LevelMaster™ Level Monitoring Control System* the benefits of continuous accurate monitoring and control of liquid levels in a small diameter well are achieved.

Please contact EPG Companies Inc. to discuss your specific application needs.

* Please visit our web site at www.epgco.com for more information regarding our Level and Flow monitoring systems, control panels and our complete line of submersible pumps.

Leachate Pumps ♦ Remediation ♦ Control Systems Integration ♦ Telemetry
